

Chicago Bird Collision Monitors invites you to
**Bird diseases in a changing environment:
Avian malaria in migratory thrushes over 20 years**

Tuesday, April 16, 2019

7:00 pm

North Park Village Nature Center
5801 N. Pulaski Blvd

Studies of salvaged birds at the Field Museum show that avian malaria, a widespread bird parasite, has high seasonal and annual variation, increasing our understanding of how birds and their changing environments may influence the spread of disease.

This lecture is free and open to the public.
